

RESOURCE

Environmental impact assessment of irrigation and drainage projects

|

Author(s)

Dougherty, T.C. Hall, A.W.

Description / Abstract

The guide aims to be of general application to irrigation professionals throughout the developing world. It meets three objectives:

- It describes the methodology and output of an EIA
- It provides inter-disciplinary advice related to irrigation and drainage to those engaged in preparing EIAs
- It supports institutional capacity building for carrying out an EIA

The guide provides a brief reference text, which will be of most benefit to non-specialists in developing countries who may be facing the need to carry out an environmental assessment for the first time.

Technical and engineering content is kept to a minimum throughout the report. The guidelines are divided into six parts:

- An introduction to EIA
- The social, institutional and legal issues concerned with effective use of EIA.
- The EIA process, including: screening, scoping, prediction and mitigation, management and monitoring, auditing, public participation and managing uncertainty; possible major environmental impacts of irrigation and drainage projects; guidance on how to prepare terms of reference; a guide to other publications and recommended texts.

Publication year

1995

Publisher

Food and Agriculture Organization of the United Nations - FAO

Keywords

Social and Environmental Impact Agriculture Irrigation Drainage

Thematic Tagging

Ecosystems/Nature-based solutions Water services
