

RESOURCE

Integrating gender responsive indicators in the SDG process with focus on water

|

Description / Abstract

This document is based on extensive work done by the members of the working group of the WWAP programme. This report aims to contribute to:

- Formulation of indicators related to “ water” in such a way that they are gender-responsive
- Making the connection between Goal 5 and 6
- Showing the value of gender-disaggregated data in providing strong support for the monitoring of post-2015 / sustainable development goals
- Build capacity for national gender-disaggregation data-gathering projects;
- Create baseline knowledge related to water, from which gender progress can later be evaluated;
- And already looks and contributes to the “means of implementation” for proposed target 17.18: “by 2020, enhance capacity building support to developing countries, including for LDCs and SIDS, to increase significantly the availability of high-quality, timely and reliable data disaggregated by income, gender, age, race, ethnicity, migratory status, disability, geographic location and other characteristics relevant in national contexts”.
