

RESOURCE

The Gender Advantage: Women on the Front Line of Climate Change

|

Description / Abstract

This publication illustrates IFAD's experience in closing the gender gap and mobilizing the 'gender advantage' in climate change adaptation through ten case studies from across the world. The case studies show that gender-sensitive adaptation results in better livelihood options and incomes, improved yields, more food security and reduced workloads for women and their families. They also show that women and men are better able to make informed decisions about their lives, thus balancing their human development priorities when giving attention to sustainable natural resource management
