

# Catalyzing Change: A handbook for developing integrated water resources management (IWRM) and water efficiency strategies

١

# **Description / Abstract**

This handbook seeks to provide countries with the knowledge they need to act on the WSSD action target in the way that is most useful for them. Strategies should catalyze action, not retard it. Each country must decide the scope and timeline for change based on its goals and its resources. The important thing is to take the first steps.

# **Publication year**

2004

### **Publisher**

Global Water Partnership - GWP

## **Thematic Tagging**

<u>Climate Ecosystems/Nature-based solutions Gender Private Sector Transboundary Urban Water services Youth</u>
